APPLICATIONS

Shadetex 300 is ideal for many applications including:

- Shade Structures
- Shade Sails
- Umbrellas
- Awnings
- Screens and Windbreaks
- Patio Shade

FEATURES

Shadetex 300 is a commercial grade shade cloth fabric manufactured from High Density Polyethylene (HDPE) monofilament and tafefilament. All filament (or yarn) is lockstitch knitted together providing a very high strength fabric. **Shadetex 300** is then heat set, this not only improves dimensional stability and consistency but ensures that it will lay flat during fabrication.

Shadetex 300 offers a very high level of UV protection with 91% - 95% block. The super tough abrasion resistant yarn means excellent durability and longevity with great resistance to mildew and chemicals.

Shadetex 300 meets NZ0000 std fire tests

WARRANTY

You can be sure that your **Shadetex 300** shade cloth will perform to your expectations with peace of mind that this fabric is backed with a 10 YEAR UV WARRANTY
